

Windows Endpoint Remediation Toolkit

Standardized tools and runbooks for enterprise Windows endpoint support. Built for help desk and desktop support teams managing Windows 10/11 fleets.

What's Included

Automated Remediation

- Modular PowerShell orchestrator with opt-in remediation switches and per-operation rollback
- Covers: Windows Update, Print Spooler, Time Service, Network Identity, Defender, Profile Health, Disk Pressure

Golden Image Toolkit

- Automates the build-account image-prep workflow: run it from a clean secondary admin while the reference account is signed out
- Disables BitLocker and auto sign-in, takes ownership of the Default profile, copies the entire reference profile into Default (including NTUSER.DAT), resets ownership to SYSTEM, and verifies the result
- Wallpaper and logon Group Policy are set by hand on the reference account; the script handles the mechanical work and verification
- Step-by-step runbook included as both markdown and a formatted PDF

ManageEngine Endpoint Central SOP

- 15-section operational manual for Endpoint Central Cloud (Security Edition)
- Decision-tree troubleshooting for 6 common failure scenarios
- Windows-only, step-by-step procedures

Standalone Troubleshooting Runbooks

- Decision-tree format designed for field use under pressure
- Domain trust recovery, Windows Update repair, profile errors, CHKDSK loops, disk space investigation

```

Requirements

Requirement	Detail
PowerShell	5.1 or later
OS	Windows 10 / Windows 11 (Desktop)
Privileges	Administrator (orchestrator does not self-elevate)

Quick Start

```
# Fix a Windows Update failure
.\orchestrator\Invoke-HelpDeskOrchestrator.ps1 -RepairWindowsUpdate -ClearLegacyWsusPolicy

# Audit profile health (read-only, changes nothing)
.\orchestrator\Invoke-HelpDeskOrchestrator.ps1 -AuditProfileHealth

# Roll back the last operation
.\orchestrator\Invoke-HelpDeskRollback.ps1 -UseLatestOperation
```

Design Principles

1. **Nothing runs unless explicitly selected.** No default actions, no silent fixes.
2. **Irreversible actions are gated.** Requires `-AllowIrreversible` flag.
3. **Every run produces a rollback snapshot.** Stored as JSON with a unique OperationId.
4. **Profile remediation is audit-only.** Destructive profile operations stay manual.
5. **Escalate, don't stack.** If one module doesn't fix it, stop and escalate.
